**RE: LB 1184 – Reverse Osmosis System Tax Credit Act**

Dear Senator Bostar,

On behalf of the American Supply Association (ASA), the International Association of Plumbing and Mechanical Officials (IAPMO), NSF, and the Water Quality Association (WQA), we want to thank you for introducing LB 1184. Your bill is very timely and will help Nebraskans in improving drinking water quality.

We applaud Nebraska for expanding access to support the installation of Reverse Osmosis (RO) drinking water treatment devices to mitigate PFAS exposure. When addressing water quality issues in legislation, our industry has two important recommendations which are enumerated below. Our organizations support LB 1184 with the request that the definition of “reverse osmosis system” in Section 2 be amended and the proposed language included.

First, we recommend that this legislation be amended to **require third-party certification of drinking water treatment devices, fixtures, and components**. Many water filtration systems claim to improve drinking water quality. However, not all products serve the same purpose; some remove only aesthetic impurities while others are certified to reduce the presence of harmful contaminants. Having an independent third-party certification mark on a product communicates compliance with voluntary and consensus performance standards, improves consumer confidence and helps eliminate concerns about the purchase and installation of non-complying products. This recommendation is aligned with the technical guidance issued by the EPA to reduce lead in drinking water in schools<sup>1</sup>.

Lastly, we recommend that this legislation be amended to **reference the appropriate NSF/American National Standards Institute (NSF/ANSI) standards for drinking water treatment devices, including filters, fixtures, and components**. There are currently no federal regulations establishing minimum requirements for the safety and performance of water filtration systems. However, there are voluntary consensus standards that are continually being updated to address emerging threats. When product requirements related to water treatment technologies or drinking water system components are placed into legislation, referencing the appropriate NSF/ANSI standard(s) and third-party certification requirements is vital in verifying these products work as intended.

---

<sup>1</sup> <https://www.epa.gov/system/files/documents/2021-07/epa-3ts-guidance-document-english.pdf>

Therefore, we recommend the following proposed amendments to LB 1184:

Sec. 2. For purposes of the Reverse Osmosis System Tax Credit Act:

(3) Reverse osmosis system means a **third-party certified** water filtration system that **is certified to NSF/ANSI 58 and** uses a semi-permeable membrane to remove impurities from water.

We strongly support the intent of LB 1184 and appreciate the opportunity to collaborate on this vital water quality legislation. We are available to work with you and others to answer questions surrounding water treatment.

Sincerely,

Stephen Rossi, Vice President of Advocacy, ASA

Christina Kaeini, Director of Government Relations, IAPMO

Harold Chase, Director of Government Affairs, NSF

Jordan Kari, Manager of Government Affairs, WQA

#### **About ASA**

The American Supply Association is the national industry trade association representing distributors and their manufacturers and manufacturer representative agencies serving the PHCP & PVF channel. Serving wholesaler-distributors and their supply chain partners in the plumbing-heating-cooling-piping (PHCP) and industrial pipe-valve-fitting (PVF) industry, ASA is a one-stop-shop for legislative and regulatory advocacy, ongoing business intelligence, employee training and education and peer-to-peer networking.

#### **About IAPMO**

IAPMO was founded in 1926 by government officials in the US to protect public health and safety by developing the most progressive and technically advanced plumbing, mechanical and water efficiency codes in the world. A large part of IAPMO's work focuses on product testing for the industry. Our research and testing labs are capable of testing products to more than 400 standards and we provide testing to new plumbing products that enter the market every year. These include such devices as shower heads, faucets, and water filters. Our rigorous process includes following the criteria of the American National Standards Institute (ANSI) and the International Organization for Standardization (ISO).

#### **About NSF**

NSF is an independent, not-for-profit organization founded in 1944 in Ann Arbor, MI that develops consensus national standards, provides product inspection, testing and certification, auditing, education, and related services in public health and safety. The core purpose of NSF is to "protect and improve human and environmental health." NSF has a long history of working with the EPA, FDA, USDA, CDC, and health related governmental entities at the state and local levels, as well as international bodies. NSF is a Collaborating Centre of the World Health Organization for Food Safety, Water Quality, and Medical Device Safety. NSF/ANSI 53 and NSF/ANSI 58, American National Standards developed by NSF, allow for the certification of some point of use and point of entry drinking water treatment units to reduce the levels of specified contaminants in drinking water including lead.

### **About WQA**

WQA is a not-for-profit trade association representing the residential, commercial, and industrial water treatment industry with over 2,500 members worldwide. Since its creation in 1974, WQA has worked tirelessly to improve water quality through sustainable technologies and services. Our members are manufacturers, dealers, and distributors who specialize in point-of-use (POU) and point-of-entry (POE) water filtration systems, which treat water at the tap or entry point of a home or building. WQA also operates an American National Standards Institute (ANSI) accredited testing and certification laboratory that certifies water filtration products to nationally accepted industry standards for contaminant removal.
